

L.O. begin to locate Egypt in
the world

What do we already know?

Look at the world map below. Label any parts of the map you recognise - think about countries, continents and oceans!

(recap)

What is a continent?

A continent is a large land mass separated by an ocean.

Our world's continents are:

1. North America

2. South America

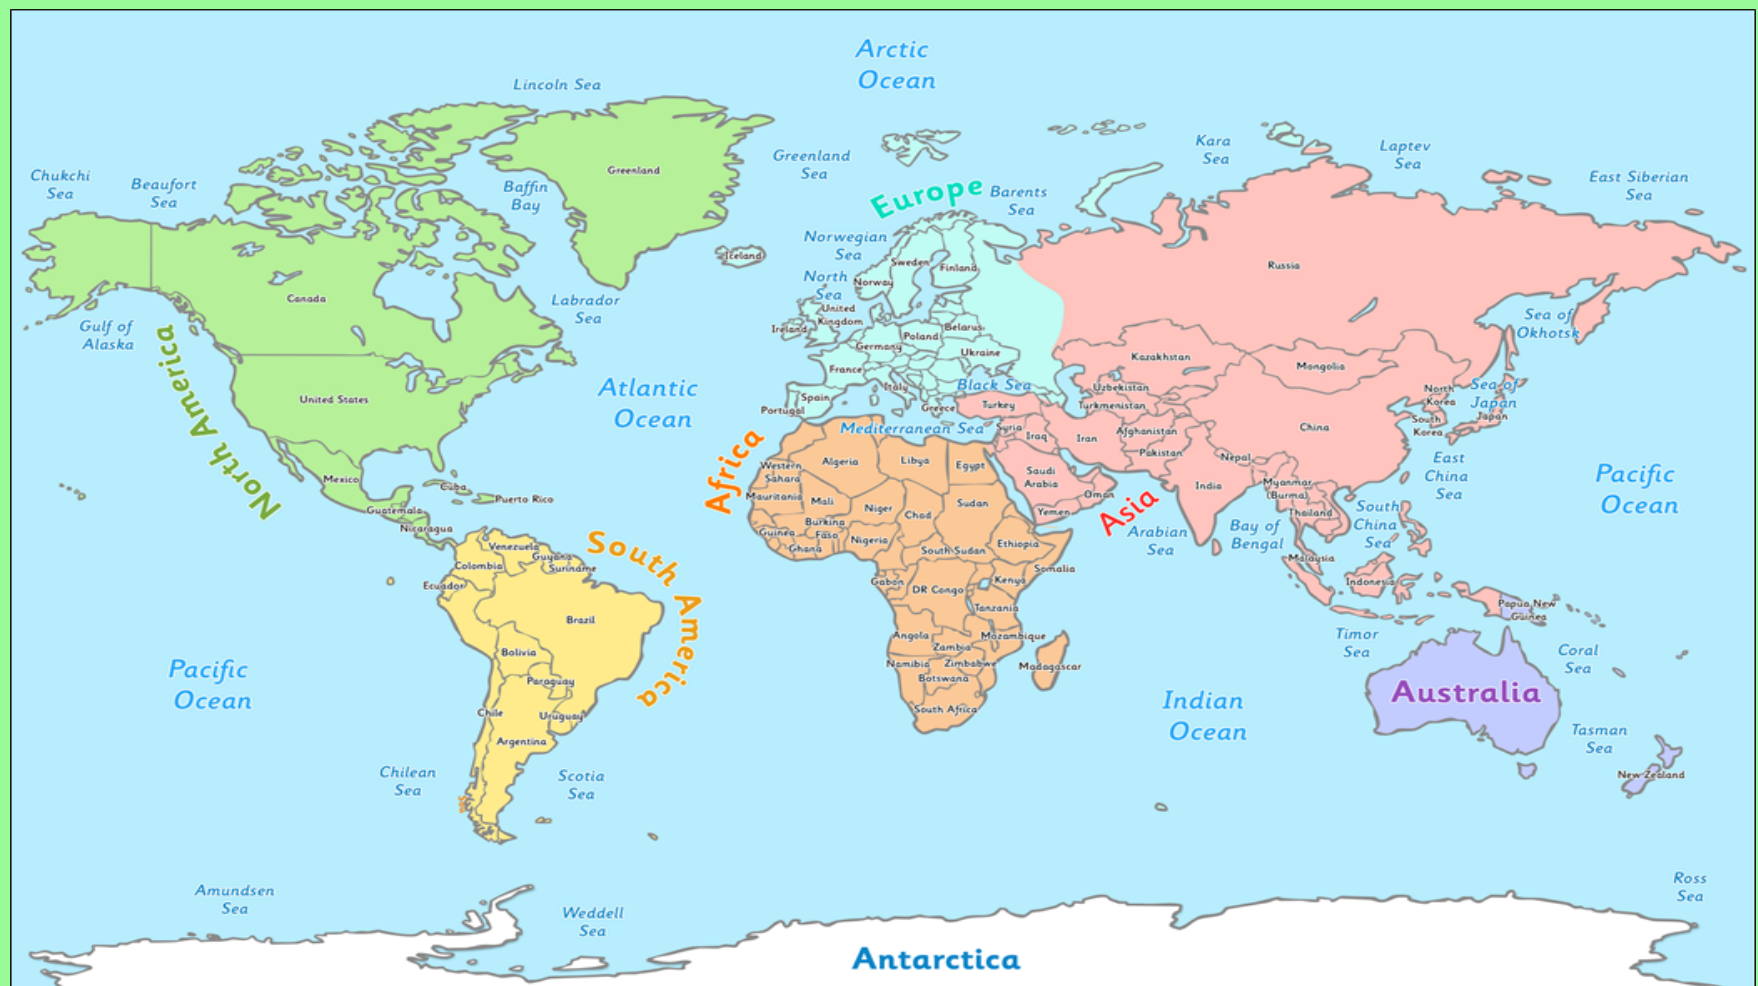

3. Antarctica

4. Australia

5. Africa

6. Europe

7. Asia

Our world's oceans are:

1. Arctic

2. Indian

3. Pacific

4. Atlantic

5. Southern/Antartic

Using the map on the previous slide, an atlas or Google maps, can you:

- locate Egypt
- identify which continent Egypt is on
- find any countries which border Egypt
- name 5 countries which are on the same continent as Egypt
- find which ocean is near Egypt

Today we are going to learn more about the country of Egypt by looking closely at maps of the country and identifying some of the most important landmarks - the cities of Cairo and Luxor, The River Nile, The Valley of the Kings and the Valley of the Queens.

This is a map of Egypt.

Note how the towns are mostly situated by the river.

Why do you think this is?

Do you think this would have been much different in ancient Egypt?

Using an atlas or Google maps, label the different parts of Ancient and modern Egypt.

L.O. begin to locate Egypt in the world

Ancient Egypt

Modern Egypt

Label the following: Cairo Valley of the Kings River Nile Luxor Valley of the Kings

Using the atlas, what else could you label on the modern Egypt map?

(use this to support the main task on the previous slide if needed)
