

L.O. to identify some of the  
physical features of Egypt

# What are physical features?

Physical features simply refers to the terrain and land mapping of a particular area on the globe, such as mountains, lakes, rivers, etc.

The Nile is one of the most popular physical features in Egypt. It provides the land with fertile soil that is perfect for crops and water for the people in Egypt. It is also the longest river on Earth. It also provides transportation, even though since airway and much more has been developed, people haven't depended on waterway travel as much.

Egypt also contains multiple deserts such as the Eastern and the Western, which is also known as the Libyan Desert. The Libyan Desert is around two-thirds of Egypt's land, covering 700,000 kilometers. The Eastern Desert mostly contains mountains and is much smaller than the Libyan Desert.

The maps on the next two slides show the different physical features of Egypt.

Take a look at the pictures OR use an atlas or Google maps to see if you can identify some of the physical features!

Map of Ancient Egypt

Key:

<input type="checkbox"/> _____	<input type="checkbox"/> _____	<input type="checkbox"/> _____
<input type="checkbox"/> _____	<input type="checkbox"/> _____	<input type="checkbox"/> _____

Using your knowledge of Egypt's physical features, create a messy map to show:

desert

Nile

grasslands

farmlands

mountains

fertile soil along the Nile

What else could you include on your map?

You can use paints, collage materials such as card, tissue, paper etc - be creative!

You could use tea leaves to represent the fertile soil, grass to show the grasslands, you could even create a map using Lego!

Please take lots of photos of your messy maps - we would LOVE to see them!

You are able to email your photographs or any messages to:
