LO: To learn the biological differences
between male and female children

Our bodies are very important.

Our legs help us to walk.

Our veins and arteries pump blood around our bodies.

Our eyes see,
our noses
smell and
our ears listen.

Our hands learn to hold and squeeze things.

Our bones help us to stand up and move around.

Girls and Boys

Are you a girl or
are you a boy?
How do you know?

The way we look or the clothes we wear often lets others know if we are a boy or a girl and our names can be a clue too..., but not always.

What about our bodies?
Are they the same?

Girls and boys have lots of body parts that are the same.

How many body parts can you name that are the same on both boys and girls?

Can you write a list and see how many body parts you can think of?

But there are some body parts that are different between girls and boys.

The differences between girls' and boys' bodies are hidden under our underwear.

You probably have a name for boys' and girls' private body parts, but today we are going to use the scientific words - the words a doctor would use.

The scientific word for our private parts is genitals.

Boys bodies

- Boys have a body part called a *penis* .
- People have other names they use for this part of the body, but the proper scientific word is *penis*.
- Behind the penis are the *testicles*.
- These body parts are only on males - that's boys and men.

Girls bodies

- Females - that's girls and women - don't have a **penis** or **testicles**.
- Girls have a **vulva** on the outside and a **vagina**, which is inside.
- People have other names for these too, but **vulva** and **vagina** are the proper scientific words.

Private parts

When we are babies and toddlers, we don't think about doing things in private, or hiding our private parts.

Babies and toddlers don't mind people seeing them in the bath and are sometimes naked at the beach, but they don't feel embarrassed. As we get older, we find that we like to be more private. We like to wear a swimming costume or swimming shorts at the pool or the beach. We like to go to the toilet in private and we might not want to take a bath with our brother or sister anymore.

Can you sort these body parts into the Venn diagram above?

Now complete the worksheet neatly. Be careful to copy the spelling accurately for all of the scientific vocabulary.

LONG DATE

LO: To learn the biological differences between male and female children

Use the word bank to label the body parts. You may have to use some words more than once.

Word bank

feet
vagina
hands
mouth
penis
eyes
legs
tummy
head
arms

Which body part do boys have which girls do not have? _____

Which body part do girls have which boys do not have? _____

Reflection -

Males and Females

It isn't just humans who have different male and female bodies. Look at these animals and spot the differences. Do you think there might also be differences we can't see in the pictures?
